

Новите енергийни етикети

ЕС прие нов формат и визуално оформление на енергийните етикети за 6 групи продукти:

- ▶ Съдомиялни машини
- ▶ Перални машини и сушилни
- ▶ Хладилници, в т.ч. охладители за вино
- ▶ Лампи
- ▶ Електронни екрани, в т.ч. телевизионни монитори и цифрови информационни дисплеи
- ▶ Хладилни уреди с функция за директна продажба ("търговски хладилници" като нова категория продукти).

Тези нови етикети ще се появят в магазините (вкл. онлайн) от 1 март 2021 г.

What are the new features of these energy labels?

- ▶ A return to the well-known and effective energy labelling scale 'A to G' for energy efficient products, including a process for rescaling the existing labels, e.g. removal of the A+ to A+++ classes.
- ▶ A digital database for new energy efficient products, so that all new products placed on the EU market are registered on an online database, allowing greater transparency and easier market surveillance by national authorities.
- ▶ A new element in these labels is a QR code with which consumers will be able to get additional, official (non-commercial) information by scanning the code with a common smartphone. This data is being inserted by manufacturers into the EPREL EU database.
- ▶ Depending on the product, the energy labels will display not only electricity consumption, but also other energy and non-energy information, with intuitive new pictograms, to compare products and perform a better informed purchase choice: information about water used per washing cycle, storing capacity, noise emitted, etc.

Please note that the energy labels for some product categories will remain in the same format, as available today – their transition to new labels will take place at a later date. These include cloth driers, air-conditioners, space heaters and water heaters, etc.

Internal Commission estimations value the total annual final energy savings of these new labels by 2030 at 38 TWh/year, equivalent to the annual electricity consumption of Hungary.
